

Development of a
Freshwater Management
Tool to support integrated
watershed planning for
Auckland waterways

BE THE HOW.
WHAKAMAUA KIA TINA!

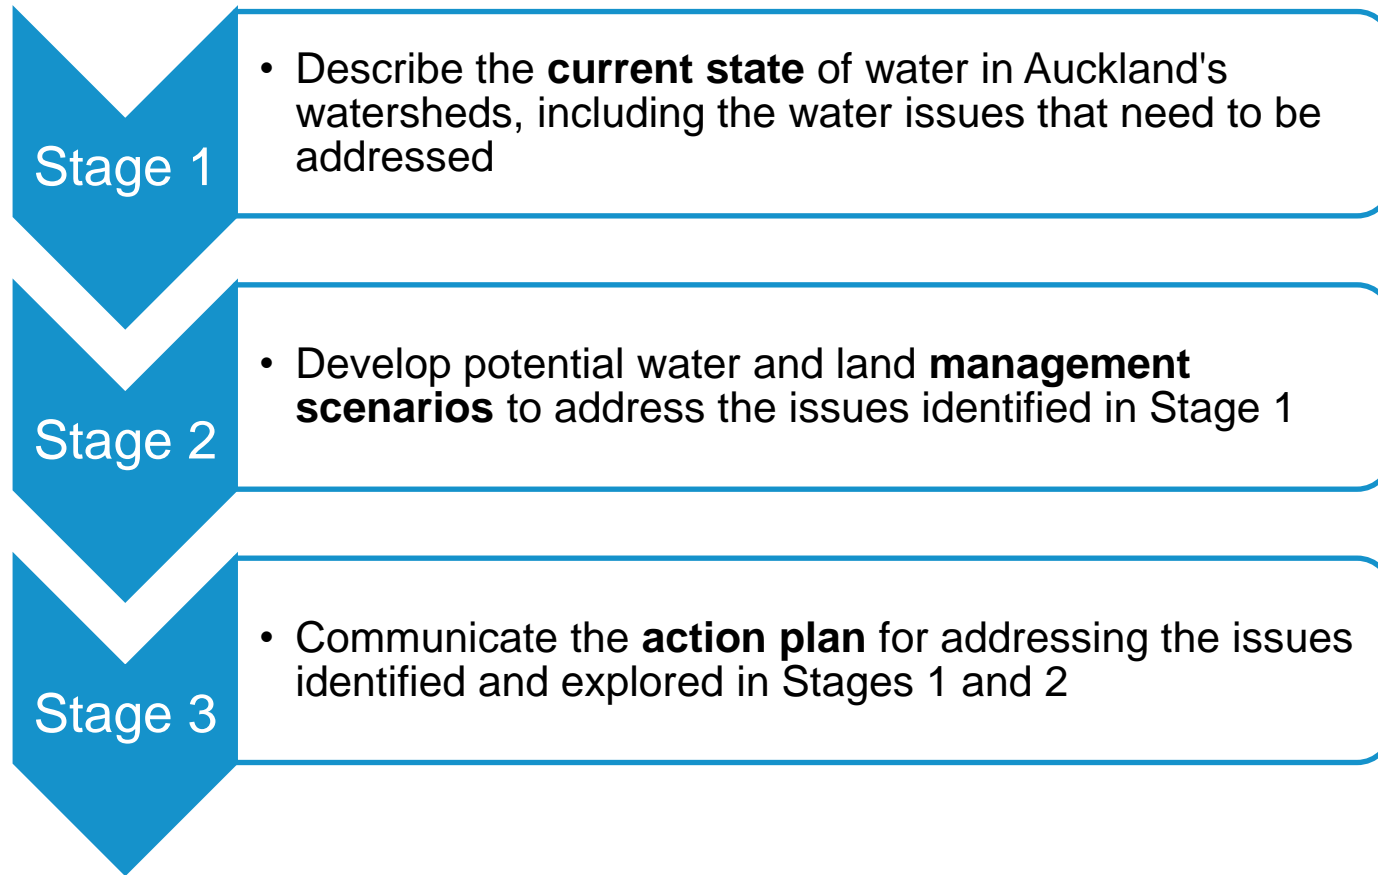

Long-Term Integrated Watershed Planning

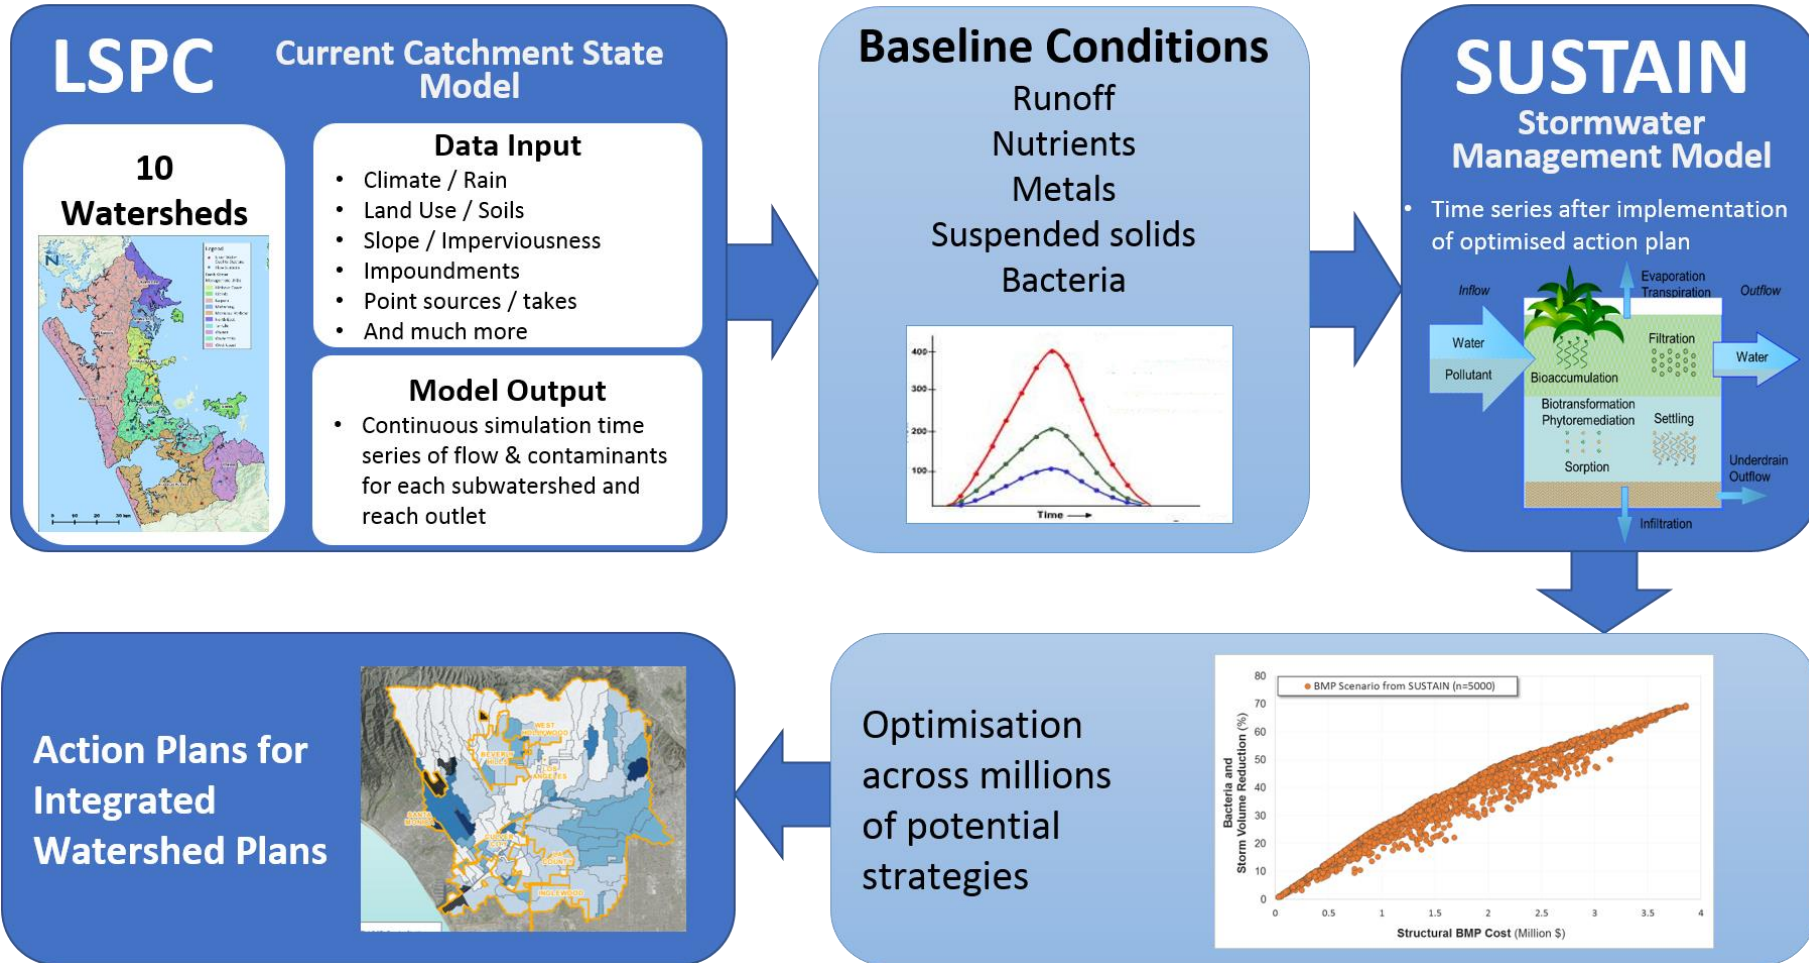

- Auckland Council's Wai Ora Healthy Waterways Programme
- Auckland Unitary Plan (AUP)
- National Policy Statement for Freshwater Management (NPS-FM)
- 10 watersheds in Auckland with Integrated Watershed plans being developed
- Fresh Water Management Tool (FWMT)
- Collaboration with Morphum Environmental & Paradigm Environmental

OTARA CREEK CATCHMENT

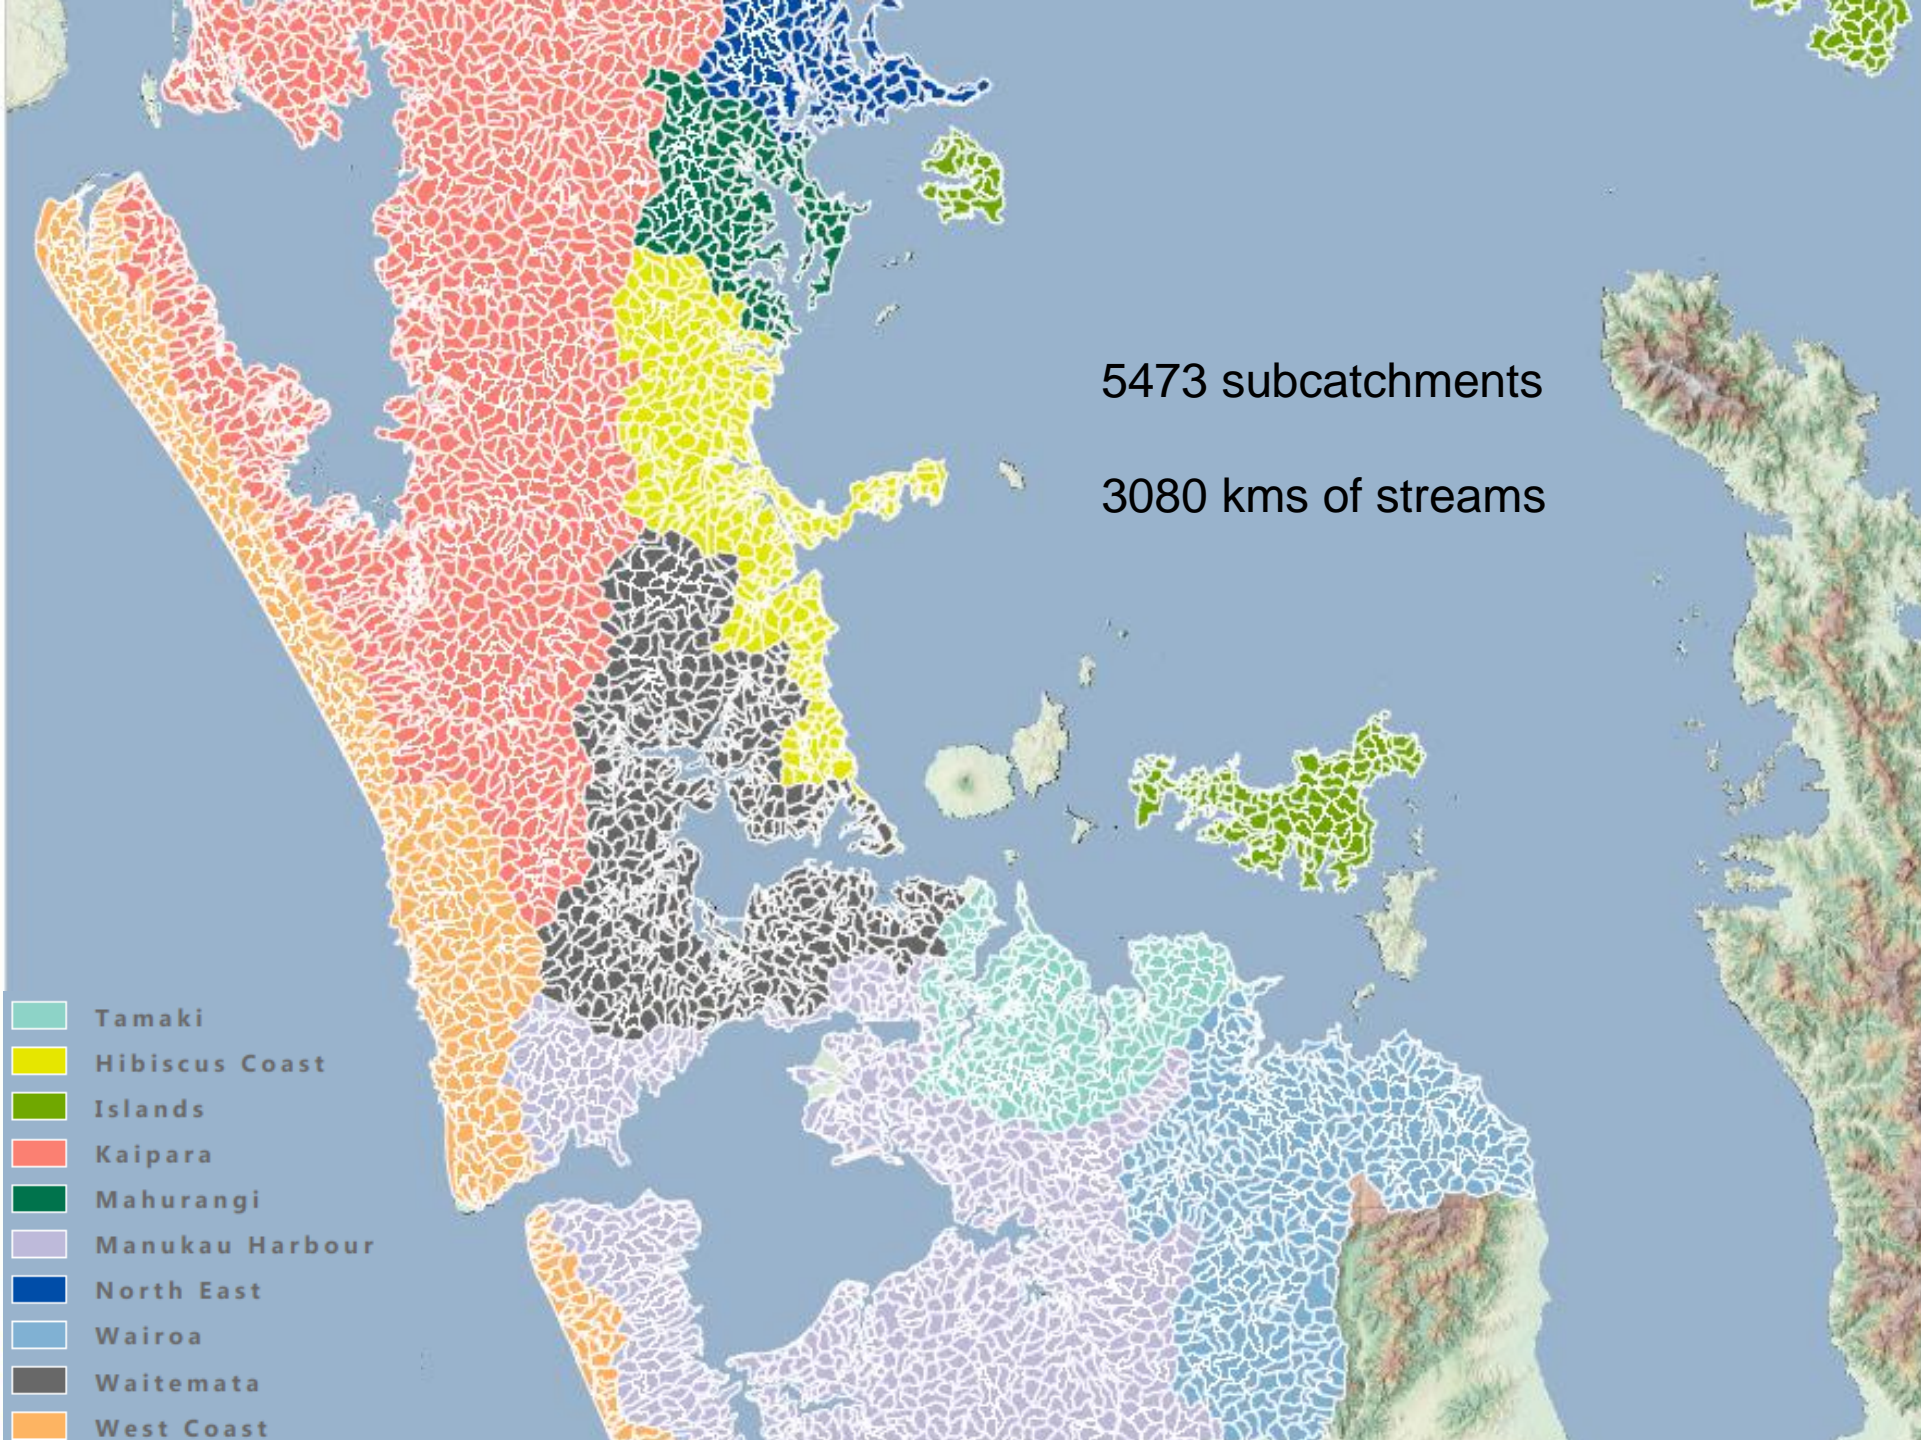

Legend

- Reporting node
- Digitised watercourse
- Sub-catchment boundary

Client **AUCKLAND COUNCIL**
Project **FRESHWATER MANAGEMENT TOOL**
0 1000 2000 m

Project no. **P01663**
Date: **14 Dec 2017**

Drawn: **RF**

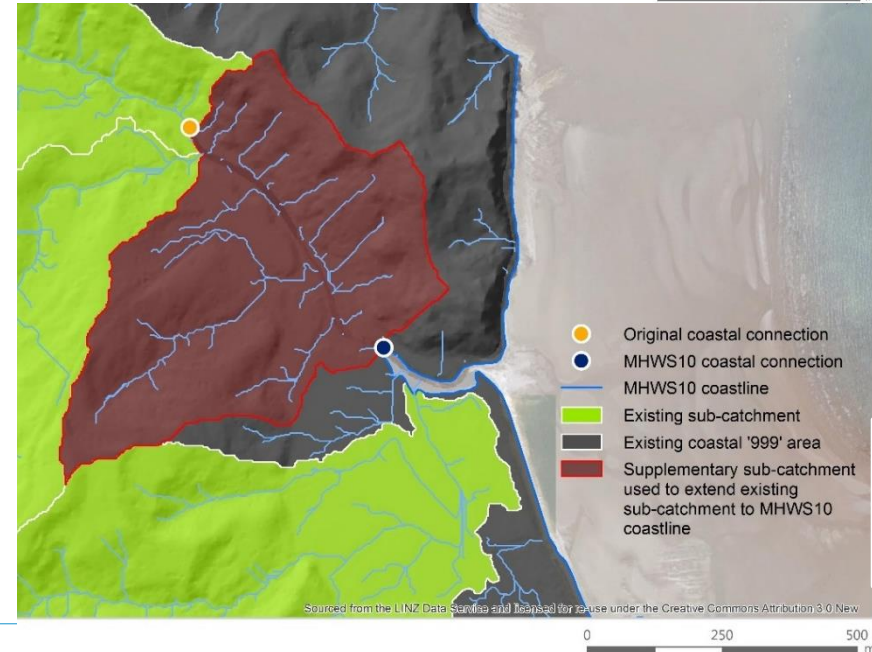

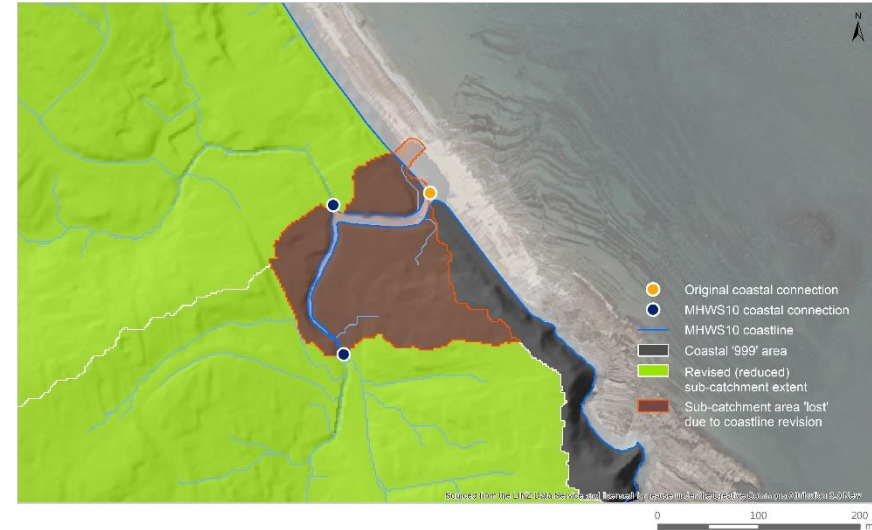

5473 subcatchments

3080 kms of streams

- Tamaki
- Hibiscus Coast
- Islands
- Kaipara
- Mahurangi
- Manukau Harbour
- North East
- Wairoa
- Waitemata
- West Coast

Data: Successes, Challenges and Lessons

- Successes
 - Initial running of the LSPC model is demonstrating the quality of data
 - Great array of available datasets
 - VCSN
 - Lidar
 - Fantastic data library and resource for the Auckland catchments
- Challenges
 - Characterising rural land use
 - Alignment of different catchment boundaries
 - Processing time
 - Data gaps and deficiencies
 - Data incongruencies – varying use and control

First Pilot Model Runs (No parameter adjustment)

| Calibration Metrics (07/01/2006 - 06/30/2017) | Relative Mean Error | Recommended Error Criteria | | | |
|--|---------------------|----------------------------|----------|----------|------|
| | | Very Good | Good | Fair | Poor |
| Total Annual Volume | 0.4% | ≤ 5% | 5 - 10% | 10 - 15% | >15% |
| Highest 10% of Flows | -0.2% | ≤ 10% | 10 - 15% | 15 - 25% | >25% |
| Lowest 50% of Flows | 0.8% | ≤ 10% | 10 - 15% | 15 - 25% | >25% |
| Annual Storm Volume | 6.3% | ≤ 10% | 10 - 15% | 15 - 25% | >25% |
| Summer Storm Volume | 12.7% | ≤ 15% | 15 - 30% | 30 - 50% | >50% |
| Annual Baseflow Volume | -10.6% | ≤ 10% | 10 - 15% | 15 - 25% | >25% |
| Baseflow Recession | 16.4% | ≤ 3% | 3 - 5% | 5 - 10% | >10% |

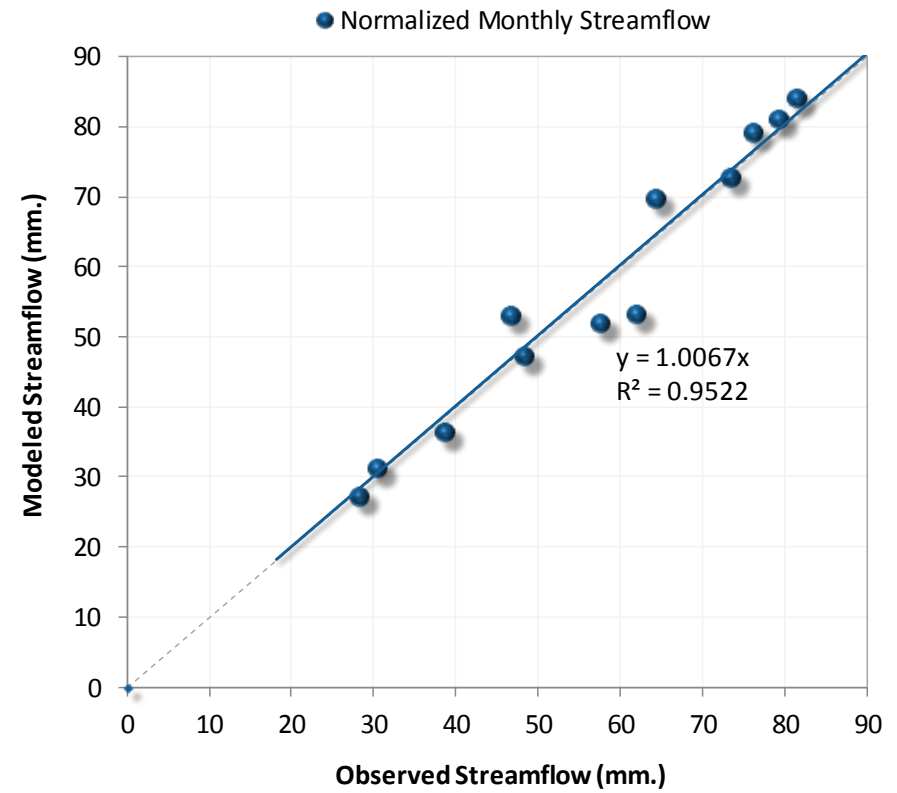

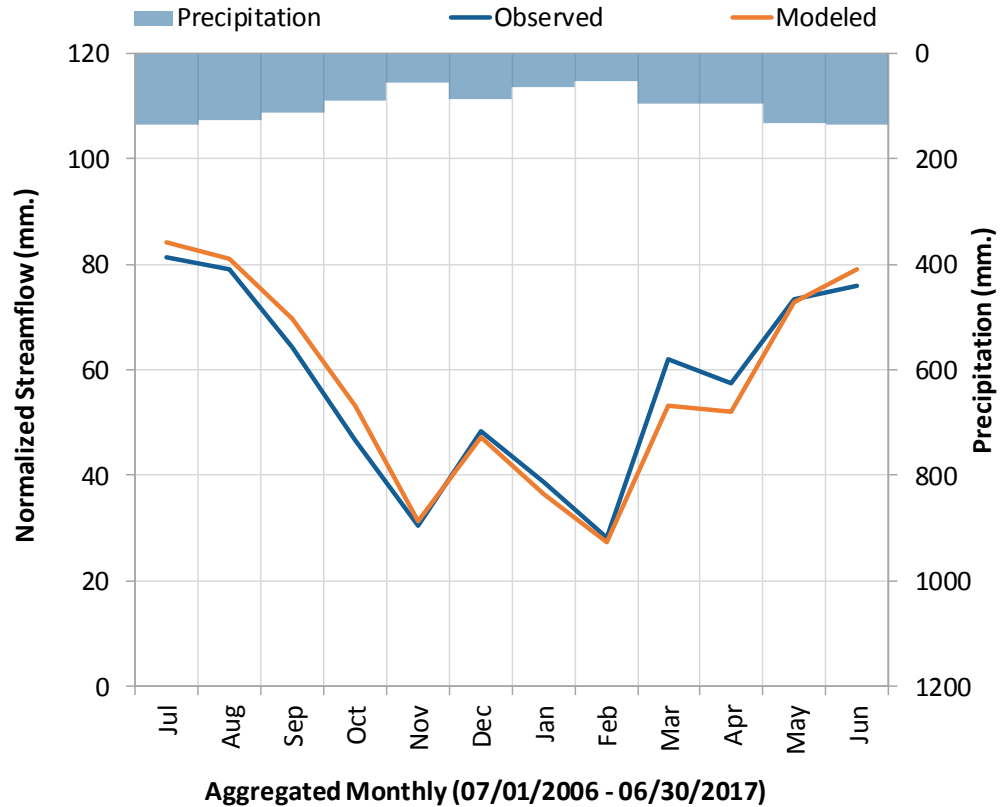

| Calibration Metrics (07/01/2006 - 06/30/2017) | Relative Mean Error | | | | |
|--|---------------------|--------|--------|--------|-------|
| | Annual | Winter | Spring | Summer | Fall |
| Seasonal Total Volume | 0.4% | -9.1% | -1.3% | 4.6% | 5.3% |
| Seasonal Storm Volume | 6.3% | -5.1% | 8.5% | 12.7% | 5.2% |
| Seasonal Baseflow Volume | -10.6% | -19.1% | -22.2% | -6.7% | 5.4% |
| Seasonal Baseflow Recession | 16.4% | 18.9% | 15.6% | 13.3% | 15.0% |
| Nash-Sutcliffe Efficiency (E)* | 0.81 | 0.80 | 0.82 | 0.85 | 0.76 |

* E = 1 Perfect match of modeled to observed
 0 < E < 1 Model predictions as accurate as observed mean
 E < 0 Observed mean better predictor than model

| Performance Metrics | |
|---------------------|------|
| Very Good | Good |
| Fair | Poor |

- Initial results highlight the power of high-resolution model setup for reducing calibration burden (land uses, subwatershed and weather).
- Will adjust baseflow/groundwater parameters regionally

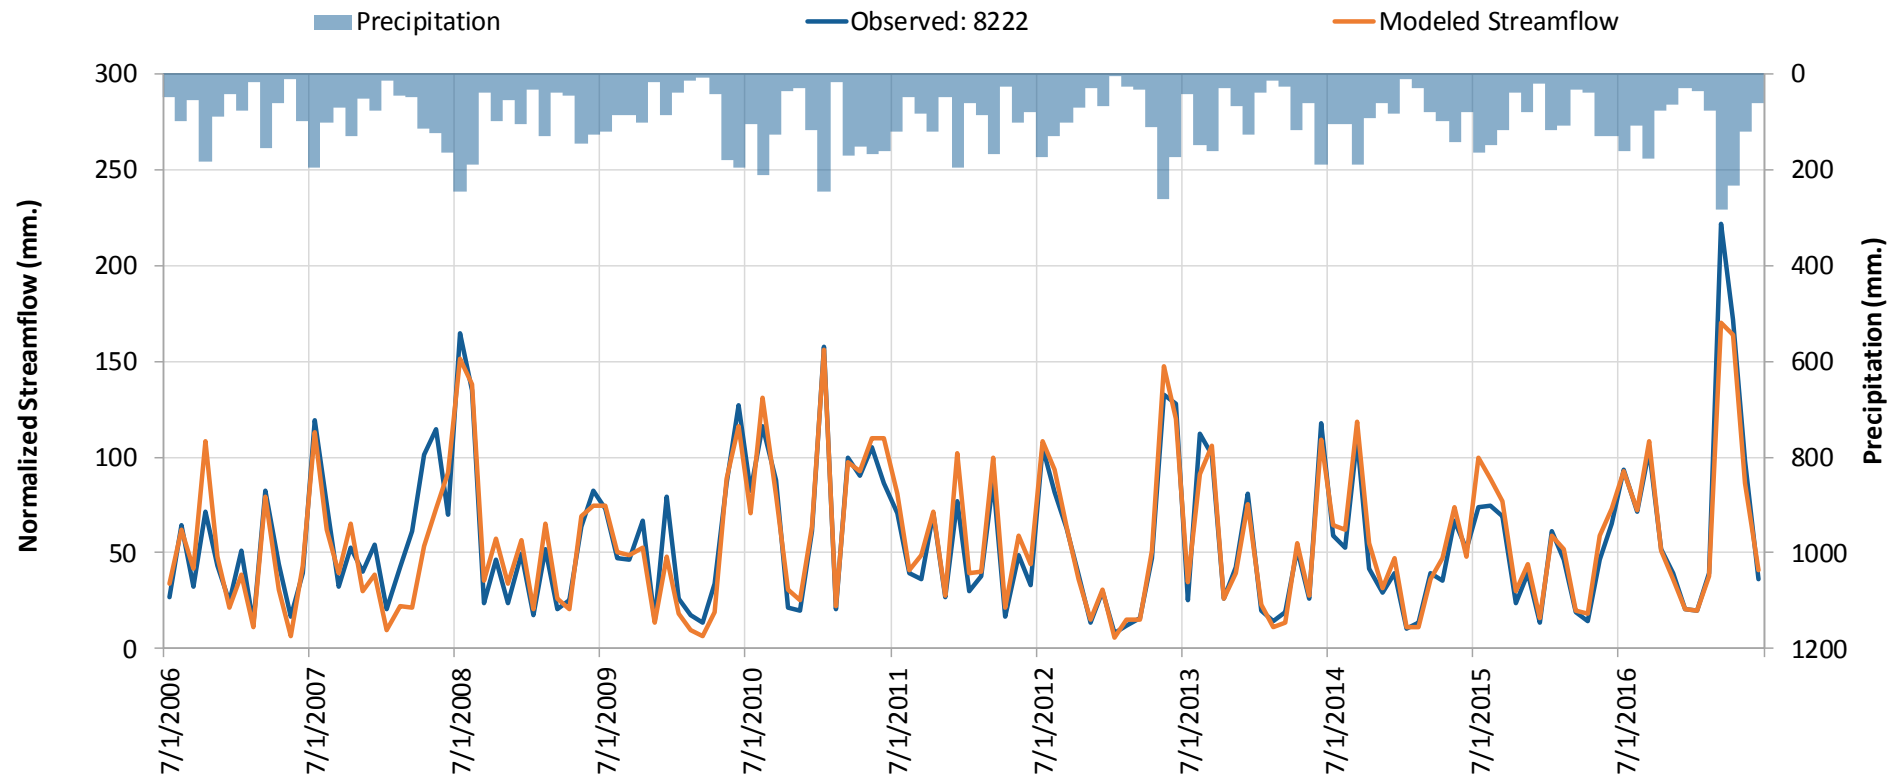

First Pilot Model Runs (No parameter adjustment)

First Pilot Model Runs (No parameter adjustment)

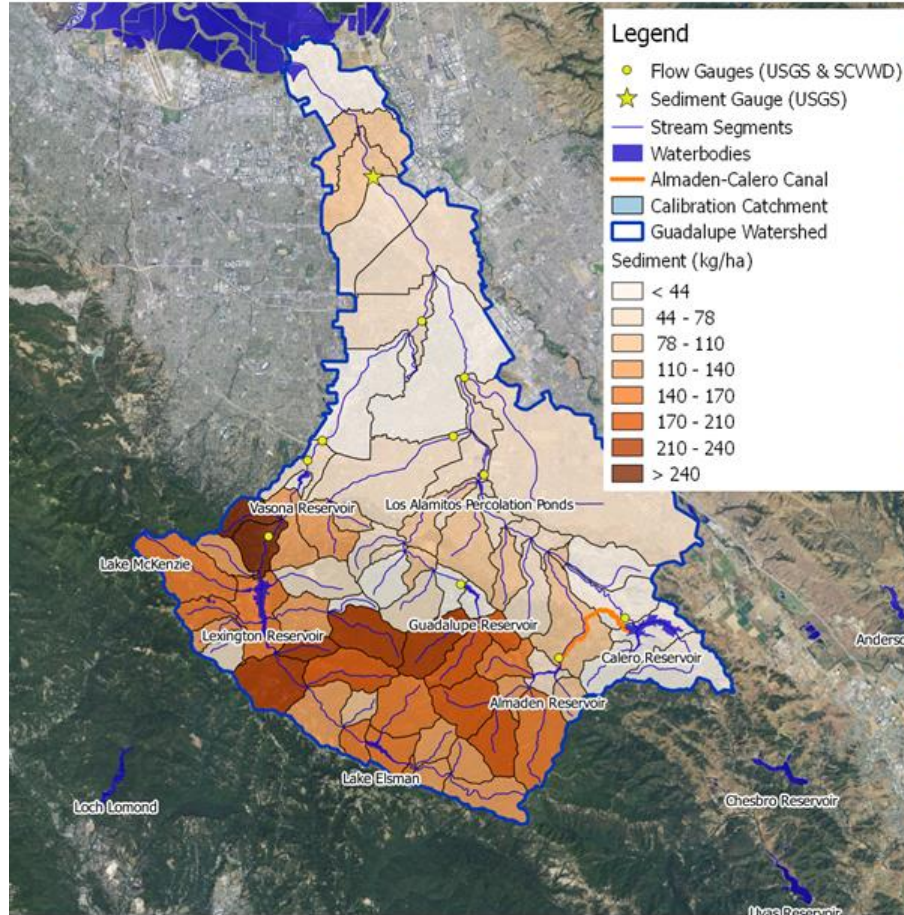

First Pilot Model Runs (No parameter adjustment)

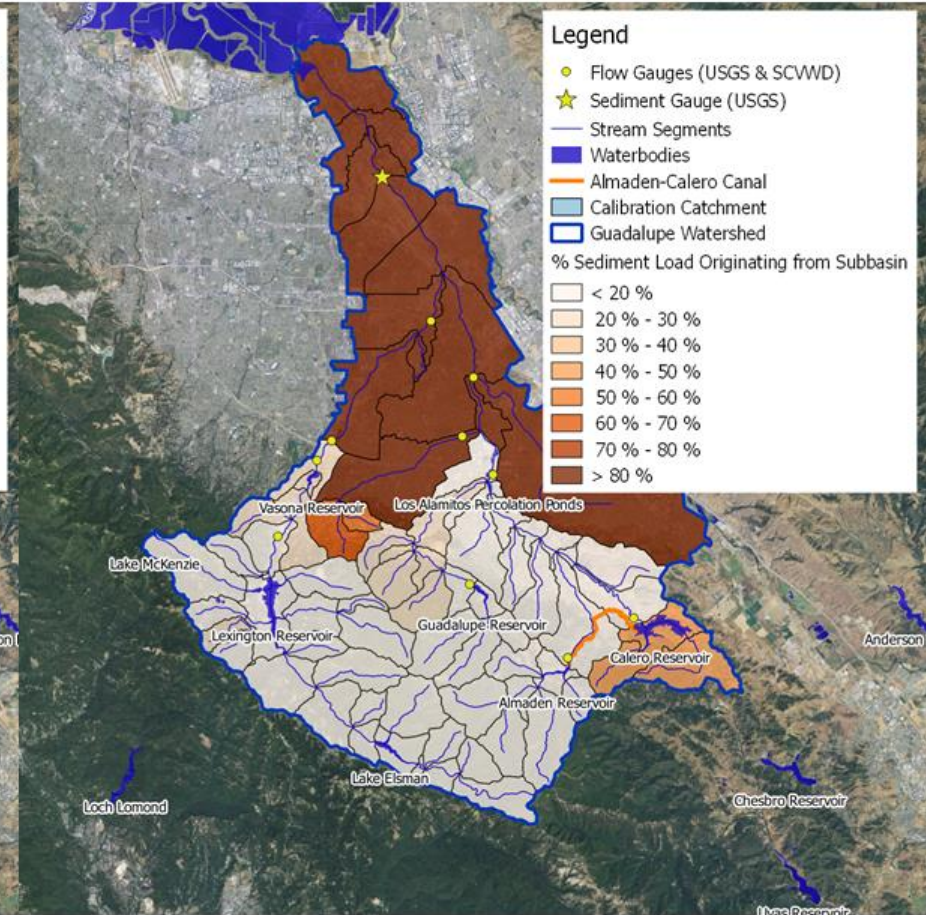

Model Outputs

- The LSPC model for each watershed is being developed and calibrated instream with an emphasis on hourly or finer time series outputs for the following “primary” constituents:
 - Flow rate
 - Sediment (total suspended solids)
 - Bacteria (*E. coli* and *Enterococci*)
 - Metals (total zinc and copper)
 - Nutrients (total nitrogen and phosphorous))
- In addition, the LSPC model for each watershed will include outputs for additional “secondary” constituents:
 - Temperature
 - Nutrient species (nitrate, nitrite, organic nitrogen, ammonia, phosphate and organic phosphorous)
 - Dissolved oxygen, biochemical oxygen demand
 - Phytoplankton, chlorophyll-a

Sediment (at Source)

Sediment (Delivered to Mouth)

Average Annual Model Results: 10/1/1999 – 9/30/2015

Determination of yield at source or after delivery

FWMT Process Overview

Example Interventions (Urban)

- (1) **Source Control**
- Enhanced sweeping
 - Zinc roof reduction
 - Reduced brake pad emissions

- (3) **Parcel-scale Retention and Use**

- (2) **Linear Bioretention**

With: Opportunities
and Cost
Functions

- (4) **Downstream Wetlands and Basins**

Example Interventions (Rural)

(1) Source Control

- Reduced stock density
- Good farm practices
- Improve onsite WW systems

(2) Land Interventions

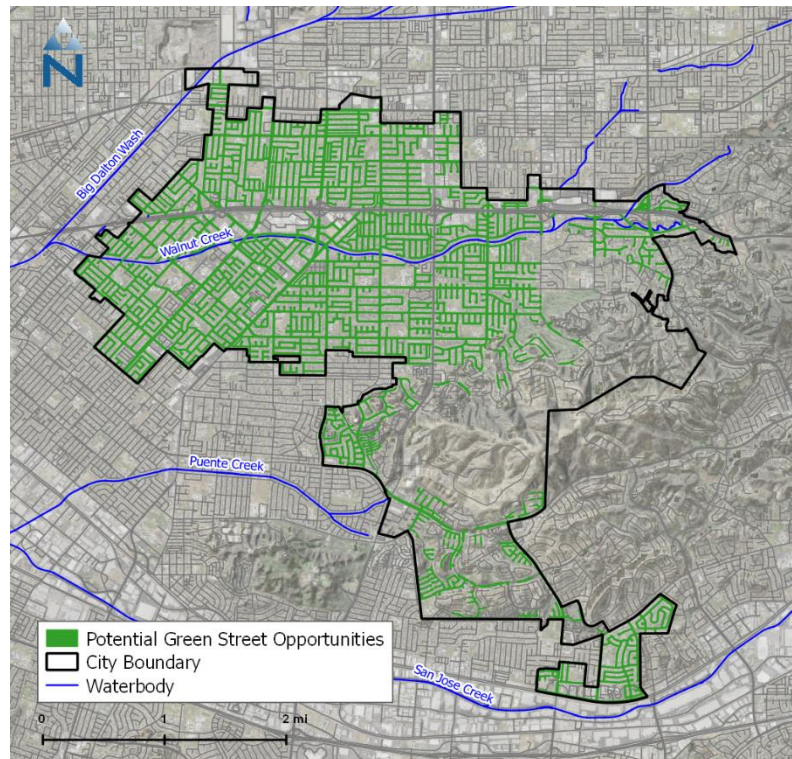

- Riparian buffers (1m, 5m, ...)
- Buffer strips

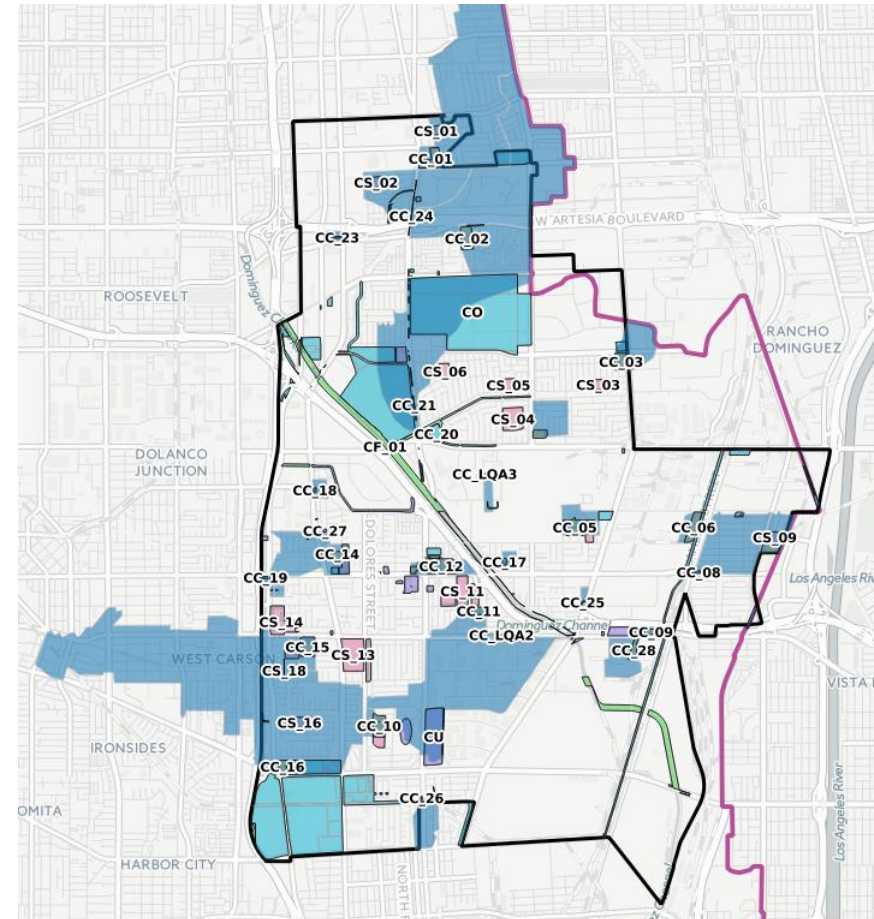

(2) Downstream Wetlands and Basins

Example Opportunity Screening (Max)

Street Retention Opportunity Screening

Infiltration Basin Opportunity Screening

Example Representation of Structural Interventions (SUSTAIN)

Unit Cost Functions

| BMP Category | BMP Types | Formulas For Estimating Total Costs ¹ | |
|-----------------------|---------------------------------------|---|--------------------|
| | | Capital Costs | Annual O&M |
| LID and Green Streets | Bioretention with Underdrain | $Cost = 17.688 (A) + 2.165 (Vt) + 2.64 (Vm) + 3.3 (Vu)$ | $Cost = 2.54 (A)$ |
| | Bioretention without Underdrain | $Cost = 9.438 (A) + 2.165 (Vt) + 2.64 (Vm)$ | $Cost = 2.54 (A)$ |
| | Residential LID | $Cost = 4.000 (A)$ | -- |
| | Permeable Pavement with Underdrain | $Cost = 33.594 (A) + 3.3 (Vu)$ | $Cost = 1.74 (A)$ |
| | Permeable Pavement without Underdrain | $Cost = 25.344 (A)$ | $Cost = 1.74 (A)$ |
| Regional BMPs | Pump | $Cost = 56,227 * (Pump Capacity_{cfs}) + \$1,207,736^2$ | |
| | Regional Project on Public Parcel | $Cost = 10.01 (A) + 2.296 (Vt) + 2.8 (Vm)$ | $Cost = 1.918 (A)$ |
| | Regional Project on Private Parcel | $Cost = 139.01 (A) + 2.296 (Vt) + 2.8 (Vm)$ | $Cost = 1.918 (A)$ |

Typical Designs

PA

Table 1-2. Existing, Planned, and Proposed Public LID design criteria

| | Parameter | Value | Units |
|------------|--|---|-------|
| Surface | Design Drainage Area | Sized to capture 85 th percentile volume | |
| | BMP Footprint | | |
| | Ponding Depth | 9 | in. |
| Soil | Depth | 2 | ft. |
| | Media Porosity | 0.35 | n/a |
| | Media Infiltration Rate | 2 | in/hr |
| Underdrain | Use underdrain if underlying soils are less than | 0.3 | in/hr |
| | Depth | 1.5 | ft. |
| | Media Porosity | 0.4 | n/a |
| | Subsoil Infiltration Rate | Match underlying soils | |

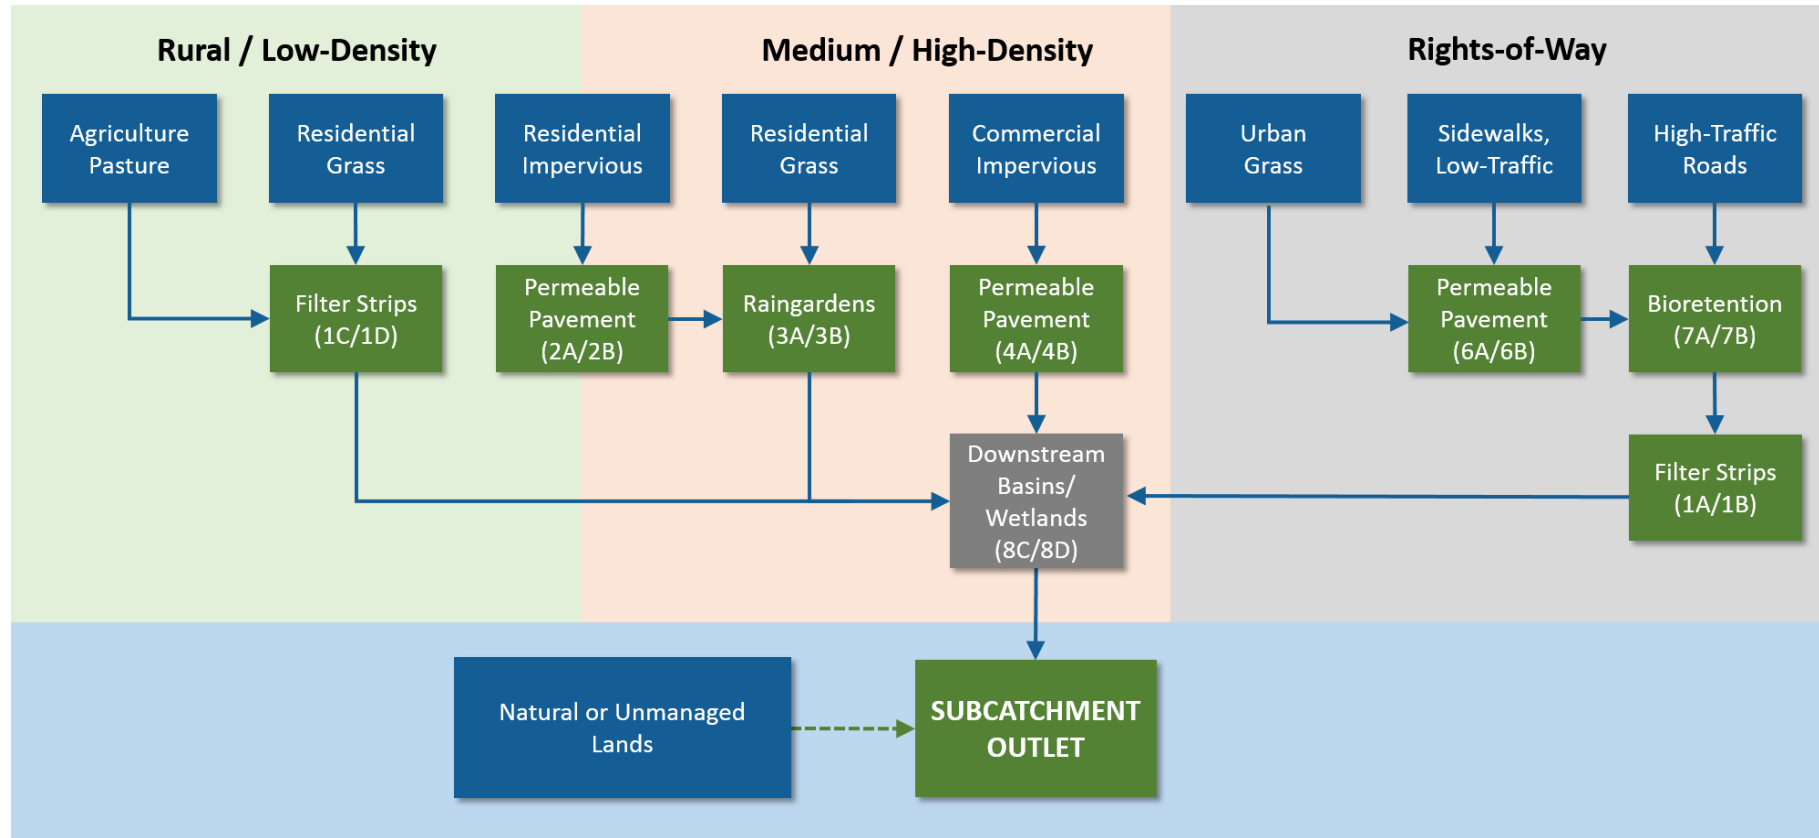

Table 1-3. Regional BMPs on public parcels design criteria

| | Parameter | Value | Units | Notes |
|---------|----------------------|--|------------|--------------------------------|
| Surface | Design Drainage Area | Specified explicitly for each Regional BMP | | |
| | BMP Footprint | | | |
| | Ponding Depth | 3 | ft. | Assumed |
| | Weir Length | 25 | % of width | Assumed to allow free overflow |

Table 1-4. LID on Private Residential Parcels design criteria

| | Parameter | Value | Units |
|---------|-------------------------|---|-------|
| Surface | Design Drainage Area | Sized to capture 85 th percentile volume | |
| | BMP Footprint | | |
| | Ponding Depth | 9 | in. |
| Soil | Depth | 2 | ft. |
| | Media Porosity | 0.35 | n/a |
| | Media Infiltration Rate | Match underlying soils | |

Example Routing Network

Cost Effectiveness Curve

1st: Use cost-optimization to identify solutions to achieve a wide range of contaminant load reductions for each watershed.

- Regional BMPs (private)
- Regional BMPs (High)
- Regional BMPs (Very High)
- Green Streets
- LID (residential)
- LID (public)
- LID (existing/planned)
- LID (ordinance)
- Implementation Cost

3rd: Extract the optimized solution for the required % load reduction, and it becomes the Watershed Management Program

1233 m³ = 1 ac-ft

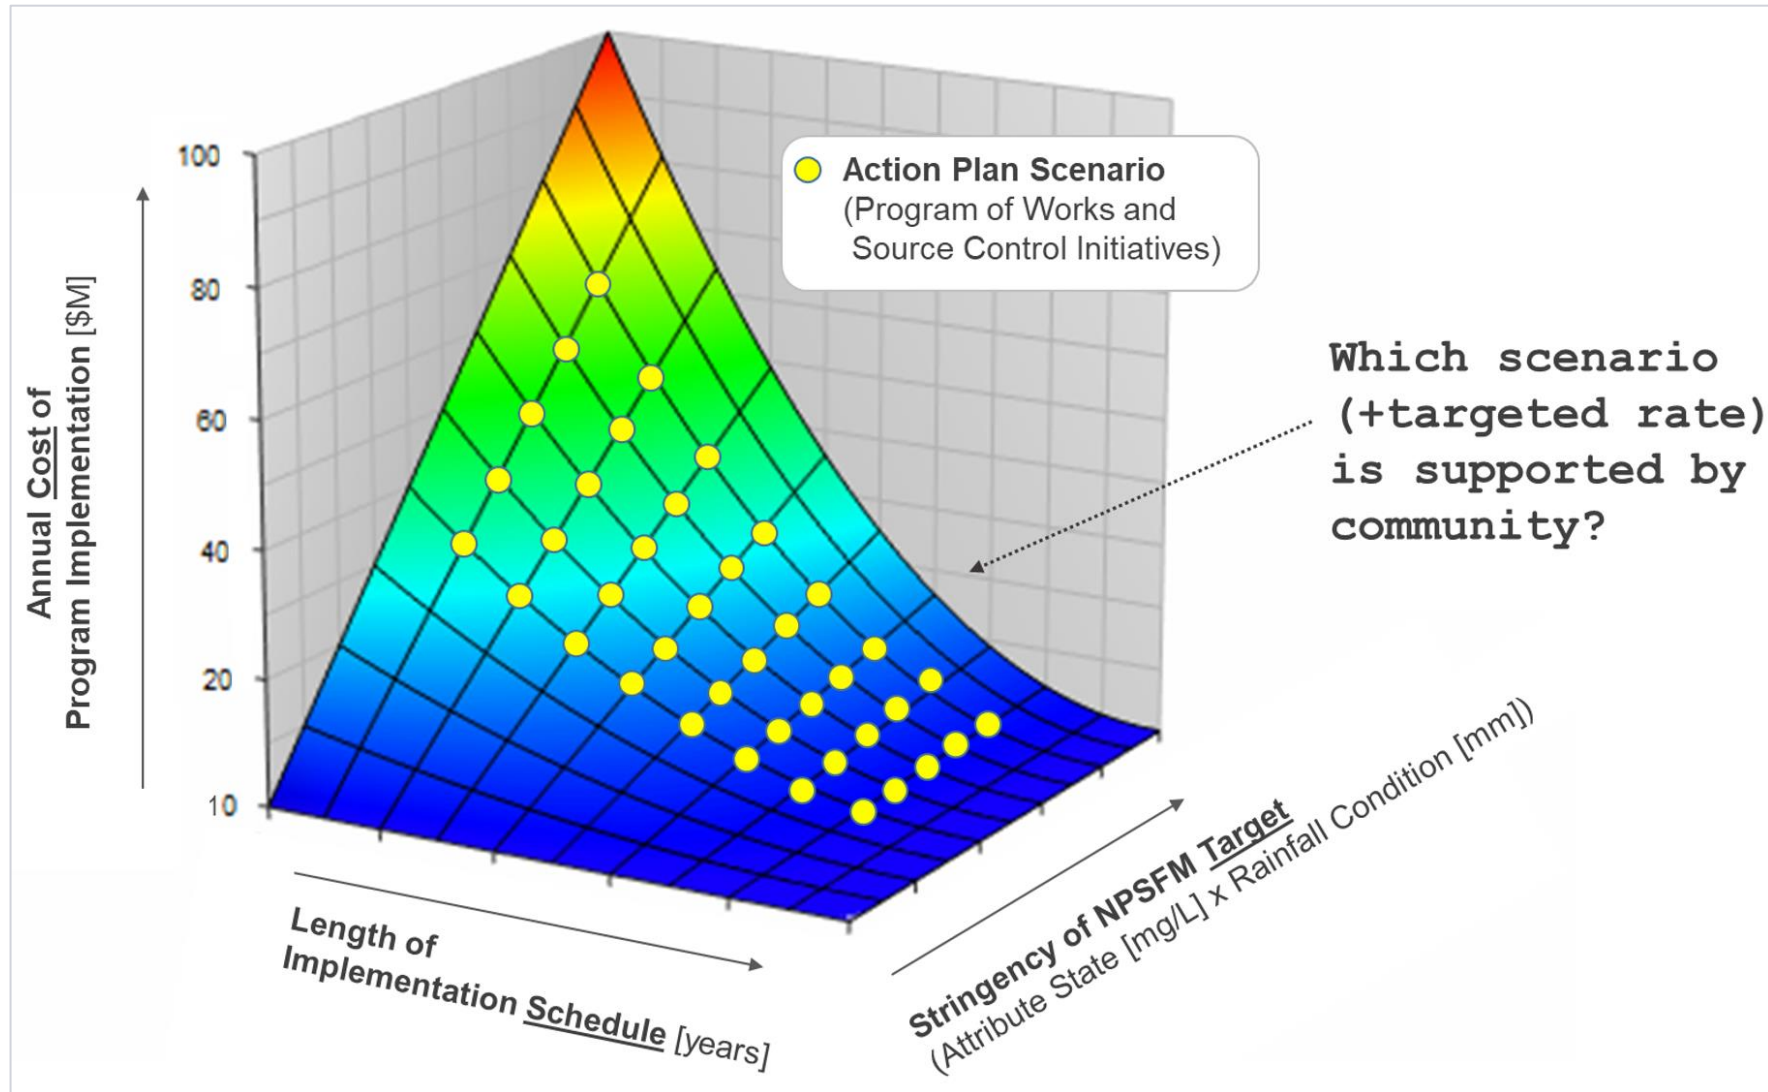

Interventions

1233 m³ = 1 ac-ft

| Subwatershed ID | COMPLIANCE TARGETS: MEASURABLE AND ENFORCEABLE | | EWMP IMPLEMENTATION PLAN: APPROACH TO ACHIEVE COMPLIANCE TARGETS, SUBJECT TO ADAPTIVE MANAGEMENT (BMP capacity expressed in units of acre-feet) | | | | | | | | |
|-----------------|---|---|--|-------------|------------|-----------------|----------------------------------|------------------------------|-------------------------|--------------------------|---------------------------------|
| | % Load Reduction Critical Condition | 24-hour Volume to be Managed (acre-ft) | Low-Impact Development | | | | Streets | Regional BMPs | | | Total BMP Capacity (acre-ft) |
| | | | Ordinance | Planned LID | Public LID | Residential LID | Green Streets, All Components | Regional BMPs (Very High) | Regional BMPs (High) | Private Regional BMPs | |
| 640249 | 9% | 1.66 | 1.03 | --- | 1.36 | 1.80 | 0.00 | 0.00 | 0.00 | 0.00 | 4.2 |

| 642049 | 6% | 0.00 | 0.00 | --- | --- | --- | 0.00 | 0.00 | 0.00 | 0.00 | 0.0 |
| Total | 39% | 50.1 | 4.1 | 0.0 | 7.2 | 7.6 | 18.0 | 14.0 | 1.0 | 6.4 | 58.4 |

Action Planning – Costs and Benefits

FWMT - Looking forward

- Adaptive management
- Program not a plan
- Supports an array of programs and policy decisions
- Adapt and improve strategies through new data
- Incorporate multiple benefits
- Incorporate lessons learned from implementation
- Track progress toward tangible goals
